

your socks should match your cleanroom

Often, the importance of the undergarment is overlooked in a Grade B and C garment validation process. We, at Alsico High Tech are convinced that this is one of the most important steps of the gowning procedure. With this importance following the new EU GMP Annex 1 section 4.13, it is required to wear suitable pre-washed and low linting socks in the cleanroom.

Wearing our cleanroom socks minimizes the risk of particle contamination in your controlled environment!
